

Term Project Proposal

Section 1: Project Title

Asha McClarence: Technical Competencies & Projects

This title clearly tells visitors that the website is a professional portfolio focused specifically on my technical competencies and the projects I'm working on.

Section 2: Project Type

Personal Website

This type fits because the primary goal is to host a professional resume, showcase personal hands-on projects, and market skills to potential employers.

Section 3: Project Background

This website will serve as a professional, static digital portfolio designed to display my experience in cybersecurity, so far. As a student entering a highly technical field, having a visual repository of my skills is critical to provide tangible proof of my capabilities in cyber defense and offense, programming, ethical hacking, scripting, web programming, data analytics, and automation. The website will present a downloadable web-optimized resume, detailed labs, projects, script repositories, automation walkthroughs, and data visualization dashboards.

Section 4: Target Audience

Audience 1: Technical Recruiters and Talent Acquisition

- **Who they are:** HR professionals and recruiters looking to fill entry-level Cybersecurity architect, Cloud Engineer, or Junior Dev-Ops roles.
- **What information they will look for:** Clear alignment with job descriptions, certifications, structured career history, a downloadable resume PDF, and contact information.

- **Why the website is useful for them:** It allows them to quickly screen my qualifications, understand how my past career skills transfer to tech, and easily invite me for an interview.

Audience 2: Cybersecurity Hiring Managers and Lead Engineers

- **Who they are:** Technical team leads who make the final decision on hiring and prioritize practical, hands-on skills.
- **What information they will look for:** GitHub links, code snippets, step-by-step project write-ups, proof of problem-solving abilities, and documentation of tools used (e.g., Wireshark, Nmap, Python).
- **Why the website is useful for them:** It proves I can do the actual work, demonstrates my technical documentation skills, and shows my passion for self-directed learning.

Section 5: Planned Website Pages

1. **Home (Index):** A welcoming landing page featuring a small professional headshot, a high-level summary of core skills, and quick links to featured projects.
2. **About & Experience:** A detailed page mapping out my educational journey and previous career history. It will highlight transferable skills like project management, problem-solving, or communication.
3. **Technical Projects:** A grid layout displaying cards for various projects (e.g., an automated log analyzer script, a packet analysis write-up, or a data analytics dashboard).
4. **Digital Resume:** A clean, web-formatted version of my resume.
5. **Contact:** A professional page with an HTML contact form, direct email address, and links to my professional LinkedIn and GitHub profiles.

Section 6: Simple Site Map

Global Navigation Header:

[Home | About | Technical Projects | Digital Resume | Contact]

- **Page 1: Home (index.html)**
 - Hero Section: Headshot & Tech Interests
 - Core Skills Summary
